HYPACK 2018 Seminar in Poland

By Ivan Izaak

This year, we held the 4th HYPACK® Seminar in Poland. It was at Gdansk University of Technology. As always, the event was well organized by Professor Andrzej Stateczny from Marine Technology. There were 49 visitors; most of them are students from University of Technology, Marine Academy, Novy Sad University and Maritime University of Gdynia. There were also customers from some Polish, Romanian and Croatian companies, as well as a few freelancers from Norway and Germany.

As usual for this seminar, I have divided it into two sections: theory and practice. Most of the topics from survey preparation, single beam and multibeam surveys, single beam and multibeam data processing and final products were covered. It is a good opportunity to check most of the HYPACK® modules on 35 computers at once!

I would like to thank Prof. Stateczny for the excellent organization of both the theoretical classroom and practical lab, and for gathering all the visitors.
