

## New Utility Driver: RemoteLogLine.dll

By John Marinuzzi

RemoteLogLine.dll is a new utility driver designed to give you the ability to synchronize logging and line operations among two or more instances of SURVEY or DREDGEPACK® on different computers through a network connection.

Here are the functions available:

### Line Functions:

- Increment/Next Line
- Decrement/Previous Line
- Swap Line Direction
- Goto/Select Line
- Add Line
- Unload Line File
- Load Line File (must exist on both computers in the current project)

### Logging Functions:

- Start Logging
- End Logging
- Restart Logging
- Suspend Logging
- Resume Logging
- Abort Logging

In the Driver Setup dialog, you can elect to send and/or receive either one or both function type.

**FIGURE 1.** RemoteLogLine Driver Setup

A UDP client network connection allows each computer to both send and receive messages.

The Device window is a basic readout of the commands sent and received.

This driver requires SURVEY 19.1.0 or later. If you are interested in using this, please contact HYPACK Support for more information. It will be available in our quarterly updates.
