## COMPLETE LiDAR SURVEYING SOLUTION

The LiDAR Payload system is a portable topographic LiDAR surveying solution that uses HYPACK® for data collection and processing. With a platform agnostic mounting system, and an IP 67 rated enclosure, the Payload is ready for use on boats, drones, or terrestrial vehicles. The Payload features tightly integrated LiDAR and GNSS sensors along with HYPACK® software installed on an onboard PC. This budget-friendly solution is designed to meet your topo LiDAR surveying needs quickly and easily.
