HYPACK Licensing: Lease or Buy?

By Boris Schulze

Hydrographic Software packages have come a long way in the past years. From simple programs in the 80's where it showed the vessel on the screen and planned lines, to a full solution that provides all tools to plan a survey, acquire the data from all your instruments, process the data and produce charts, models, etc. The software nowadays not only logs data, but allows you do quality control testing for your survey, and fix your data in case something goes wrong as well. (Ok, not everything but quite a lot).

This advanced functionality software now plays a central role in a hydrographic system as it is the tool that tells you if your survey is going the right way or if there is something wrong with your system. Naturally this has made the software bigger, more complex and of course more expensive.

Like the hardware that you buy, you will have to purchase the software. Recently we have had a couple of requests from customers that asked if it would be possible to lease the software rather than buying it. Some customers have a large project requiring a few more versions for a limited time, some smaller companies do struggle with the investment into a full hydrographic system, as this can be really expensive.

So we decided to offer our customers a choice: Not only can you buy a perpetual license, but we also offer a lease option. Here is the deal: We do offer several packages as a lease for a year (or longer if you require it). The packages that are available for lease are our most popular ones:

- > HYPACK® Max
- > HYPACK® Max & HYSWEEP®
- > Survey & HYSWEEP®
- > Office & HYSWEEP® Office

The lease price includes free support and updates for the duration of the lease. If you decide to purchase the license after the lease we even grant a discount!

If you are interested in leasing the software rather than purchasing it, contact us or our resellers.

Stay healthy!

Boris
