## ANNOUNCING: TERRADEPTH AND HYPACK WORKFLOW

---

We are excited to announce that HYPACK has partnered with Terradepth on their geospatial software solution, [Absolute Ocean](#). By working together, HYPACK and Terradepth provide a seamless workflow from data collection to delivery.

Terradepth's Absolute Ocean is designed to help organizations manage, collaborate on, and visualize geospatial data, allowing HYPACK's customers to increase operational efficiency by making better-informed decisions. The outcome of this partnership gives customers access to a complete solution for data acquisition, processing, and management.

We will be hosting a webinar in early March to show how this workflow provides a complete solution from data collection to delivery. A registration email will be sent out in the near future, so keep an eye on your inbox.

We look forward to a long and successful partnership that will provide our customers with the tools they need to achieve their objectives!
